

## Additional Fees

---

### Installer Site Survey

**£60**

For installations that can't be assessed remotely or if you prefer an on-site visit, a qualified electrician will visit your property. This is essential for jobs involving extensive ground works, third party approvals or have complex electrical equipment.

---

### Earth Bonding

**£100  
per service**

Your home must have suitable earth bonding to water and heat services before we can install your EV charger. (18th Ed. BS 411.3.1.2) This is the most common additional cost for customer which we identify on the day of installation.

---

### Isolation Switch

For a safe EV charger installation, we need a way to isolate your electricity supply. We can arrange the installation of a single-phase isolation switch alongside your electric meter. This allows our EV Installers to connect a new circuit to power your EV charger. This is the most common additional cost for our customers which we identify before installation.

**£90**  
Single Phase with EV  
charger installation**£150**  
Single Phase as a  
standalone job**£450**  
Three Phase from

### Enhanced Installation

**£180**

Upto 15 meters of specialist cable and install materials, including a surge protection device and upto 4 hours of labour.

---

### Enhanced Plus Installation

**£320**

Upto 20 meters of specialist cable and install materials, including a surge protection device and upto 4 and a half hours of labour.

---

### Bespoke Installation

**from £450**

Bespoke installations require specialist tools, materials and additional time to complete. We'll prepare an itemised quote for you following a site survey.
